**Response to FINAL Office Action of June 6, 2001**

The Final Official Office Action dated 6 June 2001 in the above-identified application has been reviewed and Applicant submits the following remarks in response thereto.

**Remarks**

Applicant notes that 10-20 are allowed. Claims 1-9 and 21-30 have been finally rejected.

The present invention of claims 1-9 and 21-30 comprises the dynamic allocation of channels within a sectored cell of a cellular communication network. Available channels are allocated in groups to particular cells based on any of a number of frequency reuse patterns. Each cell is divided into sectors, and the channels assigned to a cell are allocated in subgroups to the sectors. A controller local to each base station monitors the use of channels within cell sectors, and dynamically re-allocates one or more channels to a sector whose utilization exceeds a predetermined threshold, after
